HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current **SMALL ENTITY status:**

A. If the status is the same, pay the TOTAL FEE(S) DUE shown

B. If the status above is to be removed, check box 5b on Part B -Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 481 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 481 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Allowable Subject Matter

Claims 9-17 are allowed. The following is an examiner's statement of reasons for allowance: The prior art does not teach or suggest: " a series circuit of two diodes connected in parallel with each cell of the cell stack and connected to conduct current in a direction from a minus pole to a plus pole of the cell; a changeover switch having a number of terminals assigned to switch positions corresponding to a number of the cells of the cell stack, and a capacitor connecting each of said terminals to a respective node between said diodes assigned to the cells; a reference circuit having first and second diodes connected in series, said first diode having an anode connected to reference potential and to a cathode of said second diode; a differential amplifier having a non-inverted input connected to an output of said changeover switch, an inverted input connected via a capacitor to a node between said first and second diodes of said reference circuit, and an output; a controlled rectifier having an input connected to said output of said differential amplifier and an output carrying a direct current with a voltage, relative to reference potential, proportional to a cell voltage of the cell respectively selected with said changeover switch; a first controlled alternating current source connected between said non-inverting input of said differential amplifier and reference potential; a second controlled alternating current source connected between said inverting input of said differential amplifier and reference potential" in combination with the remaining limitations of independent claim 9.

Application/Control Number: 10/575,220

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The following references are considered pertinent to the disclosure:

U.S. 5545933 discloses measuring the working voltage of series connected cells using a diode connected in parallel across a cell, connected to a comparator. U.S. 5545933 does not disclose, at least, that there are two series diodes connected in parallel across each of the cells, with a capacitor connected to the middle node of the diodes.

- **U.S. 5063340** discloses a capacitive charge equalization circuit for series connected cells. Fig. 6B shows two series diodes connected across a single cell in parallel. However, this circuit arrangement lacks, at least, the capacitor connected to the middle node of the two diodes, and is not used for measuring voltage, but for balancing the voltages of the cells.
- **U.S. 4079303** discloses a charging system for storage batteries that utilize single diodes connected across each cell of a stack, connected to a rectifier. However, this circuit arrangement lacks, at least, the second diode, the capacitor connected to the middle node of the two diodes, and is not used for measuring voltage, but for the charging of the cells.
